## **AMENDMENTS TO THE CLAIMS**

Please amend the claims as follows:

- 1. (Previously Presented) A method for manufacturing an insert for a combustion head gasket includes the steps of: (a) providing a mold apparatus having an upper mold section and a lower mold section, said lower section defining a cavity adapted to receive a blank metal substrate; (b) placing said blank metal substrate into said cavity; (c) closing said upper mold section against said blank metal substrate to hold said blank metal substrate in place under a first applied force; (d) applying a second force greater than the first to shape said blank metal substrate into said insert; (e) supplying elastomeric material to selected predetermined portions of said insert; and (f) curing the elastomeric material.
- 2. (Original) The method of claim 1 wherein said insert is adapted to seal an engine oil flow aperture of said combustion head gasket, said insert including a body portion adapted for registration with the oil flow aperture.
- 3. (Original) The method of claim 2 wherein said insert comprises a metallic body and includes an elastomeric sealing bead bonded to said body, wherein said body is plastically deformed via said application of said second force to shape said insert.
- 4. (Original) The method of claim 3 wherein said insert is manufactured in a single mold process that includes said shaping of said insert body and said molding of said bead.

- 5. (Original) The method of claim 4 wherein said elastomeric sealing bead bonded to said body comprises a sealing portion disposed about a peripheral edge of said body portion of said insert body.
- 6. (Original) The method of claim 5 wherein said sealing body portion of said insert defines a closed loop, and wherein said insert further comprises radially extending arms provided for attachment of said insert to a combustion head gasket.
- 7. (Original) The method of claim 6 wherein at least one of said arms comprises an offset elbow.
- 8. (Original) The method of claim 7 wherein said elbow provides a connection between said arm and a shoulder portion of said insert, wherein said shoulder portion is contiguous with said peripheral edge of said closed loop portion of said insert.

١.

- 9. (Original) The method of claim 8 wherein said closed loop is generally non-circular.
- 10. (Original) The method of claim 9 wherein said mold apparatus comprises die inserts for forming said insert.
- 11. (New) A method for manufacturing an insert for a combustion head gasket includes the steps of: (a) providing a mold apparatus having an upper mold section and a lower mold section, said lower section defining a cavity adapted to receive a blank metal substrate; (b) placing said blank metal substrate into said cavity; (c) closing said upper mold section against said blank metal substrate to hold said blank metal substrate in place under a first applied force; (d) applying a second force greater than the first to shape said blank metal substrate into said insert; (e) supplying material to selected predetermined portions of said insert; and (f) curing the material.
